

Aftercare for Nail Extensions Treatment

- Gloves should be worn for dirty and for wet jobs.
- A gentle nail brush should be used regularly to prevent any dirt or bacteria becoming established under the free edge.
- Use the pad of your finger or knuckles and not the nail extensions, for example switching the light on/off or dialling the phone.
- If you wish to remove the nail enamel from your nail extensions, then use acetone free nail products.
- Do not pull, pick or bite nails off.
- Do not attempt to remove the nail extensions yourself, book an appointment with the salon for professional removal.
- We recommend regular manicures to keep your cuticles and underlying natural nails in good condition.
- Apply cuticle oil or cuticle massage cream every day.
- We recommend regular maintenance visits every two to three weeks.
